

Setting the Standard of Quality Since 1890

MARSHALLTOWN INTRODUCES THE NEW **DURAdjust™ Brick Trowels**

It has been years since the brick trowel has truly changed. MARSHALLTOWN has again raised the bar on innovation with the introduction of the DURAdjust™ brick trowel.

The DURAdjust™ brick trowel utilizes an easy-to-turn dial, located near the bumper, to increase & decrease the diameter of the handle. The handle size ranges from just below the smallest handle diameter on the market to slightly above the largest. Additional settings can be dialed-in everywhere in between. Adjustment occurs over the entire length of the handle for a comfortable feel at any setting.

Field testing of the DURAdjust™ brick trowel not only proved that bricklayers like the option to customize the size of their handle, but also that adjusting the diameter of the trowel throughout the course of the day helps to reduce hand, arm, and wrist fatigue. As the size of the handle changes, different muscle groups in the hand, arm, and wrist are used, thus reducing the strain on one specific group of muscles.

DURAdjust™ brick trowels are available only in DuraSoft® and feature the same high quality blade and bumpers bricklayers demand. DURAdjust™ brick trowels are available in every blade size and style.

DURAdjust™ brick trowels are available for immediate sale. For further information please contact:
